

What is going on in the ag department?

This week students in survey agriculture students will be learning about the history of agriculture. In ag mechanics we will be learning about the arc welding process. Students in ag metals will be working to complete our smoker build. In the managing natural resources class, students will be learning what natural resources are and why they are important to the world. It will be a short, but busy week. If you ever have questions about what we are doing in the ag department feel free to contact me.
