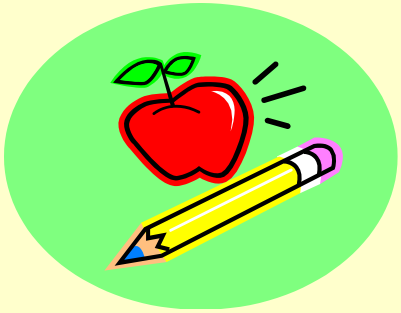
Mr.Wilson's Classroom Newsletter

Algebra 1

We have been discussing how to use proportions in a variety of ways. We have discussed similar figures, % sentences, various different types of word problems, and how to use the information in the problem to set up our own proportions. This week, we will conclude our discussions by talking about percent of change problems and then talk about independent and dependent events, or otherwise called, probability. We will, more than likely, take a Unit 4 test this Friday, October 31st. Remember, your child is able to use their notes and old homework on tests so help them get organized before Friday.



Algebra 3

We will finish our discussions this week of radical equations. We have begun this discussion but we deal with the harder level problems this week, which require factoring and checking.

We will take our Unit 4 test on Friday, which will include equations.

Algebra 2

This week, we will conclude the "by hand" portion of the matrix unit by discussing 3X3 determinants and how to use this knowledge to solve a 3X4 matrix using "Cramer's Rule".

After we get finished, there are a few things we will learn how to do with the calculator. We will should be finish with this unit on Thursday and I hope we will be able to take our Unit 4 test on Friday. Remember, all tests and quizzes are open notes and homework so begin helping your child get organized for Friday.

Contact Information

My prep period is from 8:00-8:45 every day.

My email address is wilsonc@bigelow.k12.ar.us

**Your child will more than likely have homework every Monday-Thursday night

** If possible, your child needs a calculator at home (solar for Alg 1, graphing (TI-84 for Alg 2)

Unit tests are this week. Encourage your child to get their notes and homework organized and look over their study guides!!
